

ISG™ Summit Series Printers - Downtime Mode

A Downtime Solution
To Ensure Safe &
Accurate Admissions

Keep Admissions Running Even When IT System Goes Down

Healthcare computer systems do go down from time to time. However, patients still must be admitted with barcoded wristbands. This is a patient safety issue. How do you print barcoded wristbands when your IT system is down?

The ISG™ offers two affordable and easy options with our line of ISG™ Summit Series thermal printers.

PAL Safe – A stand-alone software solution for use in downtime patient admittance to produce wristbands and/or labels. Each PAL Safe solution is customized and includes pre-designed data input and printing templates to match your specific application requirements. A stand-alone decryption utility program allows patient data to be securely uploaded into the HIS and decrypted locally with Excel in flat file formats.

Keyboard - Simply plug in a keyboard and our intelligent printers will prompt the operator to enter the required fields of data.

Identification Systems Group

— ISG™ is a nationwide network of local experts in identification, security, and card personalization, providing high quality, cost effective solutions backed by local support and the strength of our Professional Services Certification program. Each company works together to provide seamless nationwide support and collaboration in the identification and card issuance industry.
